Fullstack Web Development Assignment (Using MERN)

Overview

Build a clone of the blog page found at [Froker Blogs](#).

Requirements

Compulsory (Evaluation will be based on the following points):

- **Technology Stack:**
  - Using React, Express.js, Node.js, and MongoDB is mandatory.
- **Visual Fidelity:**
  - Visual differences of up to 30% are acceptable.
- **Like Functionality:**
  - Implement functionality for increasing/decreasing likes, handled through the backend for multiple users.
- **Pagination:**
  - Implement pagination similar to the website to display different blog posts.
- **Content Management:**
  - Properly handle the content of the blogs from the backend.
  - Use an optimized approach for content management.
- **Images:**
  - Use dummy images in the image placeholders.

Optional (Extra points for implementation):

- **Newsletter Subscription:**
  - Implement the email subscription section for the newsletter (only frontend; functionality to subscribe is not required).
- **Hosting:**
  - Host the application on Netlify or Render.

Submission

- **GitHub:**
  - Push the project to GitHub.

- Make the repository public.
- Include a proper README file with screenshots.
